Hello, my name is Calvin Chestnut. I'm a Senior iOS and Apple Platforms engineer who has been building apps since 2013. Over the past decade, I've worked across feature development, platform architecture, and team leadership, partnering with design and product teams to deliver smooth user experiences that align with business goals. Above all, I'm a curious person who loves discovering problems and building resolutions.

I'm naturally drawn to challenges that combine technical precision and design clarity, making easy things easy to accomplish and difficult things possible. Which is why I'm so excited by the prospect of aiding the development of a product as exciting as QLab. I've seen first hand what a powerful tool a single Mac at the back of the house can be for a production team, and building interfaces between powerful machines and curious users is my favorite thing about what I do.

I arrived at software development by way of the humanities. Sure, my dad had built computers in the home with my eager assistance, I recall teaching myself multiplication in the first grade with first my bedroom PC, and my first iPod turned into a need in High School to own a Mac, but I never envisioned computers being any more a part of my life than the average nerdy kid. I did, however, get the theater bug, and discover the great joy of presenting people with a vision and hopefully making an impact in their lives.

Through High School and College I was almost always involved in some stage performance, studio broadcast, or film production. Sometimes as talent or creative, but often in the production team, and what I was always drawn to was the tools. The reverence for the paint stations, protocols, the prop tables, the stage managers with their binders, and as a tech-friendly kid, the software. I can't recall if QLab was what we used in my HS Theater, but I do recall an evening with the director geeking out about the latest iMacs while we pieced together lightning cues.

To be able to create opportunities for creative expression and bring people together in the ways I got to experience would be a true joy. Thank you for your consideration.
